

Download Manager V0.8-beta-r262 Release Notes

New Features and Changes

- The progress bar has been replaced with a progress column in the table.
- Table columns can be hidden/shown by right clicking on the column headers.
- Order/product boundaries can be displayed on the new Map View (Java 8 only).
- A product's thumbnail can be viewed using the button in the Thumbnail column (only orders created with the new Bulk Download Client).
- An option to change the application banner image has been added to the Options dialog.

See the user guide for more information on these new features and changes.

Bug Fixes

The following items have been fixed and are contained in this release.

- NAIP Orthoimagery, US Topo, and Historical Topo products that are paused and resumed do not download properly.
- Open Folder and customer support email link features do not work when the application has been launched with web start.
- More than one instance of the Options, Add Single, Add Order, and About dialog box can be opened at a time. Also, they do not automatically close when the application closes.
- The Add Order toolbar button may get hidden on certain operating systems.
- The Import menu item does not do anything when selected.
- An invalid link error is displayed when the system close button is used to close the Add Single dialog box.
